him, and that thoſe that came after him and the *Romans* have much improved thoſe firſt Inventions; this Author, unwilling to ſubject his Auditors altogether to the precepts of that ancient Writer, hath choſen among the Moderns thoſe three Architects, that have the moſt univerſal approbation, to deliver their thoughts upon each of thoſe Orders, and to give us the *eaſieſt* means to put them in practiſe; for which end he hath not ſcrupled to make ſeveral alterations in their method.

In the Second he intends to be much larger, and fully to explain what hath but been touched in this Firſt part, and to compare the Sentiments which Architects have entertained amongſt themſelves, concerning the beſt Examples of the Ancients. And 'tis hoped, he will haſten ſo deſirable a work, as much as the nature of it will bear.

II. *Remarks upon Two late Ingenious Treatiſes; the one, an Eſſay touching the Gravitation and Non-Gravitation of* Fluid Bodies; *the other, Obſervations touching the* Torricellian Experiment, *ſo far forth as they may concern any Paſſages in the* Enchiridium Metaphyſicum: *By Dr.* Henry More. *Printed in* London, *for* Walter Kettilby, 1676. *in octavo.*

WE ſhall, inſtead of giving an account of this Tract, deſire the Reader to compare with it what hath been not long ſince publiſht by thoſe two eminent Philoſophers, Mr. *Boyle*, and Dr. *Wallis*; the *former*, in an *Hydroſtatical Diſcourſe, occaſion'd by the Objections of this Learn'd Author againſt ſome Explications of New Experiments made by the ſaid Mr. Boyle*; which was printed at *London* for *Richard Davis*, 1672. amongſt ſome other Tracts, *viz. New Experiments touching the Relation betwixt* Flame *and* Air; *of the Poſitive or Relative Levity of Bodies under Water; of the Airs Spring on Bodies under water, &c.* The *latter*, in a *Diſcourſe of* Gravity *and* Gravitation, *grounded on Experimental Obſervations, preſented to the R. Society*; printed for *John Martyn*, *&c.* 1675. Theſe pieces being well laid together, and the doctrine of Hydroſtaticks well underſtood and applied, will make it eaſie to the Judicious and conſiderate Reader, what to judge of the whole controverſie here treated of.
